Deltek Costpoint Partner

Costpoint Business Intelligence

Government contractors have long trusted Costpoint Business Intelligence for instant analytics reporting. But now, there's even more. Access ready-to-use and customizable reports for a distinct perspective on project metrics, dive into deep analysis with explorations, and leverage Artificial Intelligence for interactive data comparisons. Enhance decision-making with Deltek's advanced business intelligence and data analytics solution.

Benefits Include:

Leverage AI Capabilities
Easily create reports and dashboards, and uncover key insights hidden in your data.

Gain Actionable Data
Have complete visibility into project and company performance, reveal new trends and detect patterns.

Easily Access Data
Get comprehensive and flexible data—whenever you need it—via Excel, PDF, HTML and CSV.

PCI's Business Intelligence Services:

Dashboard Creation
Dashboards are interactive visualizations, such as graphs, that provide a high-level view and can be further explored in detail to access lower-level projects or organizational units.

Report Creation
Data from transaction level and up is accessible for reporting purposes, especially if it's in Costpoint. With Costpoint 8's new feature, we can now import excel data to generate reports. PCI offers customization of reports to align with end user presentation needs, whether it's for third-party applications, tailored financial views, audit files, and more.

Training
Customized training tailored to your data and skill level. PCI adapts our program to fit your learning pace.

Security
Use Costpoint Authentication Provider (CAP) to restrict access based on organization or project manager.
